WHAT'S WRONG

- **PHOTOS** — Photo count not available in public data
- **DESCRIPTION** — Thin description (27 words)
- **REVIEW RECENCY** — Reviews are fresh (last 63 days ago, 1.15/mo)
- **PRICE VS COMPS** — Priced in line with comps (-8.5%)

THE SHORT VERSION

Price is in line with the comp set.
- Rewrite the listing description to 120+ words covering sleeps, amenities, transit and what makes the space memorable.
- Shoot or swap in at least 8 professional-looking photos: hero room, bath, kitchen, one detail shot.
Estimated annual upside vs the comp median: $11,146 (an estimate, not a guarantee).

TOP FIXES, IN ORDER

1. Rewrite the listing description to 120+ words covering sleeps, amenities, transit and what makes the space memorable.
2. Shoot or swap in at least 8 professional-looking photos: hero room, bath, kitchen, one detail shot.

COMP SET - TOP 6 OF 12

#	Neighbourhood	Type	Price	Est. rev*	Reviews
1	Austin metro	Entire home	$153	$2,759	3
2	Austin metro	Entire home	$142	$12,825	121
3	Austin metro	Entire home	$148	$18,648	37
4	Austin metro	Entire home	$149	$23,244	26
5	Austin metro	Entire home	$140	$35,700	226
6	Austin metro	Entire home	$154	$34,188	55

HOW WE CALCULATED IT

1. comp set: same room type, beds ±1, same neighbourhood (fallback: 3 km radius, then metro-wide), n = 12, k-nearest by scaled [price, bedrooms, beds, baths].
2. comp_avg_occupancy from Inside Airbnb estimated_occupancy_l365d (mean of comps) / 365.
3. ESTIMATE A (price positioning): (comp_median_price − target_price) × comp_avg_occupancy × 365 = (158.50 − 145.00) × 0.359 × 365 = $1,768/yr
4. ESTIMATE B (Inside Airbnb model): median(estimated_revenue_l365d) over active comps (> $0 est. annual revenue; n = 12) − target estimated_revenue_l365d = 20,946 − 9,800 = $11,146/yr
5. conservative range: $1,768 – $11,146 per year (A → B). ESTIMATE from public data.
6. Both are ESTIMATES, not booked revenue. Actuals depend on seasonality, blocked nights, fees, and listing quality. Use as directional sizing, not as an invoice.
7. Health score: Start 100; −25 per failing signal, −12 per warning, −5 for unknown photo count; clamped to [0, 100]. Deductions: −5 photos (unknown), −12 description (warn).

*ESTIMATE - Inside Airbnb's model (estimated_revenue_l365d), not booked revenue. Directional sizing, not a guarantee. Medians throughout · occupancy blends booked and blocked nights.
