Sample Listing — Austin

Entire home/apt · 1.0BR · 1.0 bath · Austin metro · 50 reviews

SAMPLE — BASED ON PUBLIC INSIDE AIRBNB DATA — ESTIMATES ONLY

All revenue figures on this page are ESTIMATES - method printed below

+$250 → +$16,959 /yr

ESTIMATED UPSIDE VS THE COMP SET — A RANGE, NOT A SINGLE FIGURE, ESTIMATE FROM PUBLIC DATA

Conservative (price repriced only, ESTIMATE A: +$250) → full comp-median gap (Inside Airbnb model, ESTIMATE B: +$16,959). Public data, modelled, not a guarantee or an invoice.

$151	$154	29%	12 comps
your nightly price	comp median price	comp avg occupancy	neighbourhood pool

WHAT THE LISTING TELLS US

- **PHOTOS**
  Photo count not available in public data
- **DESCRIPTION**
  Description OK (78 words)
- **REVIEW RECENCY**
  Last review over 2 years ago
- **PRICE VS COMPS**
  Priced in line with comps (-1.5%)

TOP FIXES, IN ORDER OF IMPACT

1. Re-engage: price to your first/ next review, make checkout frictionless, ask happy guests for honest reviews.
2. Shoot or swap in at least 8 professional-looking photos: hero room, bath, kitchen, one detail shot.

THE SHORT VERSION

The biggest problem is that the listing has no recent guest reviews.

- Re-engage pricing for your next review period, make checkout frictionless, and ask satisfied guests for honest reviews to rebuild credibility and attract more bookings.
- Add at least eight professional-looking photos of the main spaces (hero room, bath, kitchen, and a detail shot) to improve visual appeal and increase booking conversion.

The estimated annual upside versus the comp median is $16,959, but this is only an estimate, not a guarantee.

COMP SET (TOP 6 OF 12)

#	NEIGHBOURHOOD	ROOM TYPE	PRICE	EST. REV*	REVIEWS
1	Austin metro	Entire home	$153	$2,761	10
2	Austin metro	Entire home	$154	$0	0
3	Austin metro	Entire home	$148	$0	0
4	Austin metro	Entire home	$147	$16,758	95
5	Austin metro	Entire home	$156	$18,720	88
6	Austin metro	Entire home	$143	$15,480	73

HOW WE CALCULATED IT

1. comp set: same room type, beds ±1, same neighbourhood (fallback: 3 km radius, then metro-wide), n = 12, k-nearest by scaled [price, bedrooms, beds, baths].
2. comp_avg_occupancy from Inside Airbnb estimated_occupancy_l365d (mean of comps) / 365.

3. ESTIMATE A (price positioning): (comp_median_price − target_price) × comp_avg_occupancy × 365 = (153.70 − 151.33) × 0.288 × 365 = $250/yr
4. ESTIMATE B (Inside Airbnb model): median(estimated_revenue_l365d) over active comps (> $0 est. annual revenue; n = 10) − target estimated_revenue_l365d = 16,959 − 0 = $16,959/yr
5. Both are ESTIMATES, not booked revenue. Actuals depend on seasonality, blocked nights, fees, and listing quality. Use as directional sizing, not as an invoice.

---

*ESTIMATE - Inside Airbnb's own model (estimated_revenue_l365d), not booked revenue. Figures above are directional sizing, not a guarantee or an invoice. Comp median uses medians throughout. Occupancy blends booked and blocked nights.
